Dextra Home Builders

Understanding the Problem

Many construction companies are taking advantage of the growth of IoT in Smart Homes.

Currently many buyers decide their purchase depending on whether it is Smart Home

Currently customers do not have information on how and how much they consume in their home

Project Objective

Analyze the 3 sub meters and the global consumption of the Dextra Home Builders pilot house in order to understand them and develop a proposal that creates value for the company.

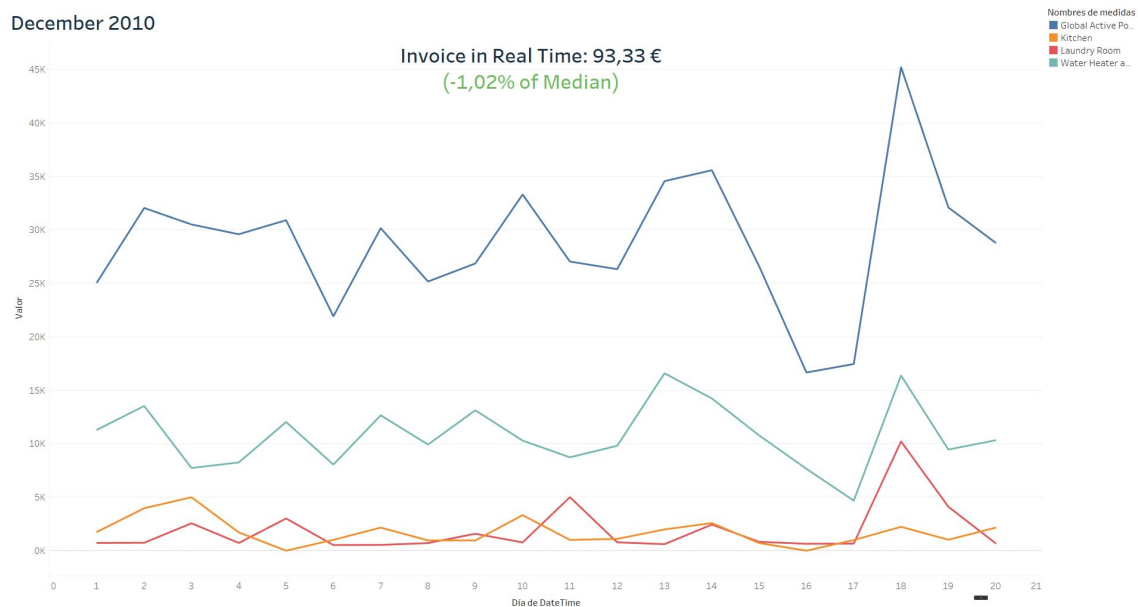

Purpose: Smart Screen

- Energy usage reports
- Predicted future consumption
- Bill control

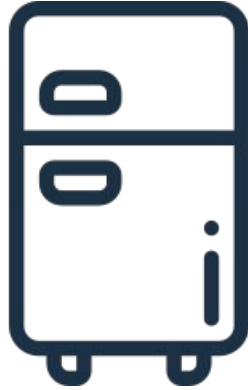

Introducing Dashboard..
